Subject: Public Comment - RSAP

Dear BCDC Commissioners,

I love the Bay and the Bay Area. We must make sure that we do not kill our Bay and make it into a bathtub with seawalls and levees! We need the natural living shoreline to be healthy and alive as sea levels rise.

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.

Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.

Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Gita Dev

Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.

Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.

Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Marilyn Price

Dear BCDC Commissioners,

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.

Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.

Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Marilyn Price

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.

Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.

Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Mary Rose LeBaron

Dear BCDC Commissioners,

Whether we live on the coast or Bay, all Californians should care deeply about the future of areas fronting bodies of water. Evidence of erosion can be found in all these areas. The implications of not planning for erosion are huge, from threats to infrastructure and buildings to unaffordable or nonexistent property insurance.

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.
3. Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Matt Williams

Subject: Public Comment - RSAP

Dear BCDC Commissioners,

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

1. Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.
2. Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.
3. Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Darrell Neft

Dear BCDC Commissioners,

My Strawberry and Tiburon neighborhoods has so many houses on Richardson Bay and some extending out over the BAY. With sea rise, their homes will be uninhabitable. We need to plan now to help these people figure out what to do. If they want to move, their land will be impossible to sell. The government will need to help these people find new affordable accommodations.

Dear BCDC Commissioners,

Sea Walls have been demonstrated low success rates long term - they don't hold up to the pressures of tidal action especially with rising seas. Talk to the experts who have turned to nature-based solutions to create a more sustainable long-term solution for our bay.

Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.
3. Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Lisa Barboza

Subject: Public Comment - RSAP

Dear BCDC Commissioners,

Nature based solutions work: nature heals itself if given the right conditions. Technological fixes, on the other hand, have a poor track record and are much more expensive than nature based solutions. Plus, many of them like carbon capture and storage, are very dangerous.

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

1. Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.
2. Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.
3. Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Nora Privitera

Dear BCDC Commissioners,

BCDC has long been a leader in protecting the SF Bay. I live near the Palo Alto Baylands and enjoy spending time there. In the past people have fished there. I hope that the Bay remains healthy for people and animals.

Subject: Public Comment - RSAP

Dear BCDC Commissioners,

I was born in Oakland and lived in San Francisco and San Bruno for many years. I think to San Francisco Bay is a jewel that must be protected. Many years ago, I sailed on the bay many times and spent a lot of time fishing the bay, into San Pablo Bay and the east delta around Crocket, Pittsburgh, and Antioch. I know there are many groups, some of which I follow, working to protect the bay, however, I was recently disturbed to find San Francisco is still dumping untreated storm and sewer water into the bay. This was a topic 50 years ago when I lived in San Francisco. I now live in the San Diego area and another 50-year-old problem has been pushed to the top some news stories and that is the situation in Imperial Beach with the ongoing sewage flow from Mexico. I realize this article is to highlight troubles in the San Francisco Bay, however, both issues point out the lack of attention from all political entities (local, regional, and state) to perform as specified by law.

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

1. Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.
2. Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.
3. Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Ken Sanford

Dear BCDC Commissioners,

The best time to mitigate climate change impacts is before they become severe. Please make this forward thinking plan a reality.

Dear Bay Conservation and Development Commissioners,

Sea level rise poses an undeniable threat to the Bay Area. The Regional Shoreline Adaptation Plan (RSAP) presents a crucial opportunity for coordinated regional action to bolster the resilience of our community and ecological assets against climate change.

San Francisco Bay's shoreline habitats are invaluable public assets. Beyond mitigating flood and storm surges, these ecosystems sequester carbon, filter pollution, and moderate temperatures - services that are vital for our region's health, safety, and ecological balance. As climate change worsens, they will become even more indispensable as our first, and arguably most cost-effective, defense against sea level rise.

As you finalize the RSAP, I urge you to champion the following strategies.

1. Make the most of nature's resiliency tools. Prioritize restoration efforts and preservation of critical lands for habitat migration, aligned with the San Francisco Bay Joint Venture's habitat goals. Deploy nature-based strategies wherever feasible to maintain biodiversity and leverage natural resilience, providing sustainable and cost-effective solutions that naturally adapt with changing conditions over time.
2. Level the playing field. Address the disproportionate impacts of sea level rise on disadvantaged and under-resourced communities. Advance environmental justice by ensuring robust community representation in decision making and prioritizing the identification, cleanup and maintenance of toxic sites vulnerable to sea and groundwater rise. Foster region-wide collaboration to empower vulnerable communities and promote equitable outcomes.
3. Create phased, adaptive resiliency pathways. Require sub-regional RSAP plans to adopt phased approaches to sea level rise adaptation. These pathways should facilitate smooth transitions between strategies as conditions evolve, employing nature-based measures first, wherever feasible.

A successful RSAP must safeguard both community wellbeing and the ecological health of Bay. By integrating the above strategies into the RSAP, we can ensure a resilient future for all.

Sincerely,

Ann Dorsey

Dear BCDC Commissioners,

As an avid SF Bay kayaker and supporter of SF Bay wildlife, I am hoping the Bay Area response to climate warming driven increased sea levels enhances SF Bay wildlife, making the Bay Area a more livable community for all of us.

Dear BCDC Commissioners,

Regional solutions are necessary. A wholistic and realistic plan is needed, prioritizing projects with higher feasibility and adaptation value, and lower environmental and environmental justice impacts.
